

SIS Epidemic Spreading (N=1000, $\mu=0.2$)

Nrep=50, Tmax=1000, Ttrans=900

Steady-state infected fraction $\langle \rho \rangle$

Infection probability β

- ER $\langle k \rangle = 4$ (MC)
- ER $\langle k \rangle = 4$ (MMCA)
- ER $\langle k \rangle = 6$ (MC)
- ER $\langle k \rangle = 6$ (MMCA)
- BA $\langle k \rangle = 4$ (MC)
- BA $\langle k \rangle = 4$ (MMCA)
- BA $\langle k \rangle = 6$ (MC)
- BA $\langle k \rangle = 6$ (MMCA)
